

Sensitivity Characterization

Back propagation is used to characterize the sensitivity of application accuracy to the output of each neuron

DNNs

AlexNet
GoogLeNet
VGG16
...

ResNet
Inception v4
DenseNet

Backpropagation determines error contributed by each neuron

Datasets

ImageNet
SVHN
CIFAR
...

Less Sensitive

More Sensitive

Sens. Map

Layer	Neuro	Sens
1	1	.15
1	2	.12
1	3	.3
:	:	:
3	1	.41
3	2	.17
:	:	:
6	3	.46

Selective Error Protection

High Protection Factor

Low Protection Factor

Sens. Map

Layer	Neuro	Sens
1	1	.15
1	2	.12
1	3	.3
:	:	:
3	1	.41
3	2	.17
:	:	:
6	3	.46

Neural network with selective error protection applied

Error protection is selectively applied to neural operations proportional to their sensitivity

Optimization

Adjust Protection Factors

Evaluate Accuracy
